Comparison: yes vs no

A volcano plot showing the results of a differential expression analysis. The x-axis represents the log2(fold change) and the y-axis represents the -log10(P-value). The plot shows a large number of genes with low fold change and low P-values, clustered around the x-axis. A few genes show higher fold change and higher P-values, indicating significant differential expression. A vertical line is drawn at log2(fold change) = 0, and a horizontal line is drawn at -log10(P-value) = 0.05. The data points are colored red.
